

REFLEX CYCLE POST

Product Name: Reflex Cycle Post

Product Description:

The Reflex Cycle Post helps to prevent collisions with posts and bollards placed in cycle lanes. The post is easy to see and flexible, making them by far the best solution on cycle lanes and cycle paths. They have LED lighting and high-reflectivity strips and are exactly the right height and width. All of this means that cyclists are much less likely to collide with them. However, if a cyclist does collide with the Reflex post, it is not rigid and has some built-in "give"; the flexible material will also bend, helping to prevent injuries. However, although the Reflex post is flexible, it has a steel core that makes sure that cars are kept well away!

Available with a fully recessed and waterproof LED lighting unit powered from a solar panel, making it fully self sufficient.

Materials:

Post: flexible polyethylene

Core: steel, galvanised.

Accessories:

- Concrete base
- Drop-box storage element
- Triangular spanner for use with removable post
- Smart LED lighting
